ENDANGERED SPECIES COLORING BOOK

The fish, birds, mammals and reptiles on the following pages have been declared "endangered" by the United States Department of the Interior and the California Department of Fish and Game. Their continued existence is threatened by one or more conditions. Immediate measures, including protected wildlife preserves, are required to ensure their continued survival.

In today's world, endangered wildlife cannot survive on its own.

Unless local, state and federal governments, as well as concerned citizens, are willing to exercise responsible care and provide funds, the prospect for survival of many of these life forms is in doubt.

As you color the beautiful creatures on these pages and begin to know and recognize them by name, try to think of ways in which you can help.

"It is not a sentimental but a grimly literal fact that unless we share this terrestrial globe with creatures other than ourselves, we shall not be able to live on it for long."
